Pressure controller

The pressure controller keeps the boiler pressure during the operation as constant as possible. The heating is turned off if the maximum operating pressure of 4 bar is reached in the boiler and is reactivated in case of a pressure drop in the boiler due to steam tapping.

Boiler thermostat

If, in case of a malfunction, there is no water in the boiler, the temperature in the boiler rises. The boiler thermostat turns off the heating. Once the boiler is filled, normal operation can continue.

Safety thermostat

The safety thermostat turns off the appliance if the boiler thermostat and the pressure controller fails and the appliance overheats in case of a malfunction.

Please contact your local KÄRCHER customer service to arrange for the reset of the safety thermostat.

Maintenance lock

The maintenance lock acts as a pressure control valve at the same time. It seals the boiler against the steam pressure that builds up in the boiler.

If the pressure controller is defect and the steam pressure in the boiler rises, the pressure control valve, and steam is emitted through the maintenance lock to the outside.

Please contact your local KÄRCHER customer service before you put the appliance into operation again.

Turning on the Appliance

- Place the unit securely on a firm surface.
→ Insert the mains plug into a socket.
→ Press the ON switch to turn on the appliance.

Note

If there is no or not enough water in the steam boiler, the water pump starts and supplies water from the reservoir into the steam boiler. The filling process may take several minutes.

- Wait until the indicator lamp (heater) lights up permanently.

The steam cleaner is ready to use.

Refilling Water

In case of water shortage, the indicator lamp "water shortage" glows red in the water reservoir and a signal can be heard.

- Fill the water reservoir up to the "MAX" marking.

Note

The water pump tries to fill the steam boiler in short intervals. If the filling process is successful, the red indicator lamp goes off.

Adjusting the Steam Quantity

Use the selector switch for the steam volume to regulate the discharged steam. The selector switch has three positions:

	Maximum steam volume
	Reduced steam volume
	No steam - child protection Note: <i>In this lever position, the steam lever cannot be used.</i>

- Set selector switch to the required steam volume.
→ While operating the steam switch, always direct the steam gun at a separate piece of cloth until the steam is emitted evenly.

Turning Off the Appliance

How to Use the Accessories

Important application instructions

Cleaning floor surfaces

It is recommended to sweep or vacuum the floor prior to using the steam cleaner. This way, the floor is already cleared of dirt/loose particles prior to the wet cleaning.

Refreshing textiles

Prior to treatment with the steam cleaner, always check the reaction of the textiles in an inconspicuous location: Steam at first, then let dry and then check for colour or shape changes.

Cleaning of Coated or Lacquered Surfaces

When cleaning painted or plastic-coated surfaces, as found on kitchen and living room furniture, doors, parquet; wax, furniture polish, plastic surfaces or paint can come loose or stains can be created. When cleaning these surfaces, briefly steam a cloth and wipe the surfaces with it.

ATTENTION

Never direct the steam jet at glued edges as the edge band may loosen. Do not use the steam cleaner on unsealed wooden or parquet floors.

Cleaning of Glass

In case of low outside temperatures, especially in the winter, warm up the window pane by slightly steaming the entire glass surface. This will prevent tensions on the surface which might lead to glass breakage.

Then clean the window surface with the hand nozzle and attachment. Use a squeegee to remove the water or wipe the surfaces dry.

ATTENTION

Do not direct steam onto the sealed locations of the window frame to prevent damage.

Steam gun

You can use the steam gun without any additional accessories, e.g.:

- to remove light wrinkles from hanging clothes by steaming them at a distance of 10 to 20 cm.
- to remove dust from plants. Here, keep a distance of 20-40 cm.
- for moist dusting, by briefly steaming the cloth and wiping the furniture with it.

Detail nozzle

The closer this nozzle is to the contaminated area, the higher the cleaning effect, as the temperature and the steam are highest at the nozzle output. Especially suited for cleaning difficult access locations, joints, fittings, drains, sinks, toilets, blinds and heaters. Heavy lime scale can be drenched in vinegar prior to steam-cleaning. Let the vinegar penetrate for about 5 minutes.

Illustration **B**

- Install detail nozzle on the steam gun.

Round brush (small)

The round brush can be installed onto the detail nozzle as an accessory. Attached brushes can therefore be used to remove heavy soiling.

ATTENTION

Not suitable for cleaning sensitive surfaces.

Illustration **C**

- Attach the round brush to the detail nozzle.

Power nozzle

The power nozzle can be installed onto the detail nozzle as an accessory.

The power nozzle increases the emission speed of the steam. Therefore, it is well-suited for cleaning very tough dirt, blowing out corners, grooves, etc.

Illustration **C**

- Attach the power nozzle to the detail nozzle according to the round brush.

Round brush (big)

The round brush can be installed onto the detail nozzle as an accessory. This round brush allows to clean large rounded surfaces (e.g. sink, shower tray, bathtub, kitchen sink).

ATTENTION

Not suitable for cleaning sensitive surfaces.

Illustration **C**

- Attach the round brush to the detail nozzle.

Hand nozzle

Pull the cloth cover over the hand nozzle. Especially well-suited for small washable areas, shower stalls and mirrors.

Illustration **B**

- Install hand nozzle on steam gun.

Window nozzle

For easy and thorough cleaning of glass, windows or mirrors.

By the steam outlet opening takes place a uniform steaming of glass panes.

Illustration **B**

- Install the window nozzle on the steam gun.
- Use the rubber lip of the nozzle to pull the glass surfaces from the top to the bottom.
- Wipe the rubber lip and the bottom edge of the window with a dry cloth after each strip.

Floor nozzle

Suited for all washable walls and floor coverings, e.g. stone floors, tiles and PVC floors. Work slowly on very dirty surfaces to allow the steam to act on the dirt for a longer period of time.

Note

Detergent residue or care emulsions that are still present on the surface to be cleaned can lead to streaks during steam cleaning. However, these will disappear with repeated cleaning procedures.

Illustration **F**

- Attach the floor cloth to the floor nozzle.
- 1 Place the floor nozzle on top of the floor cloth. Depending on model - fold before the floor cloth the long way.
- 2 Open holding clamps.
- 3 Place the cloth ends into the openings.
- 4 Close the holding clamps.

CAUTION

Do not insert fingers between the clamps.

Parking the floor nozzle

Illustration **I**

- During work breaks, hook the floor nozzle into the parking holder.

Care and maintenance

Rinsing the steam boiler

Rinse the steam cleaner boiler at the latest after 10 boiler fillings.

- Disconnect the mains plug from the socket.
- Allow the steam cleaner to cool down.
- Empty the water reservoir.
- Remove the accessories from the accessory compartments.

Illustration **K**

- Open the maintenance lock. For this, place the open end of an extension pipe onto the maintenance lock, lock it into the guide and unscrew it.
- Fill the boiler with water and swing it strongly. This dissolves lime scaling residing on the boiler bottom.

Illustration **L**

- Completely empty the steam boiler to remove existing water.

Descaling the Steam Boiler

As limescale builds up on the boiler walls, we recommend to descale the boiler in the following intervals (RF = reservoir fillings):

Degree of hardness	° dH	mmol/l	TF
I soft	0-7	0-1,3	100
II medium	7-14	1,3-2,5	90
III hard	14-21	2,5-3,8	75
IV very hard	>21	>3,8	50

Note

The hardness of the tap water can be inquired at your water management office or the municipal utilities.

- Disconnect the mains plug from the socket.
- Allow the steam cleaner to cool down.
- Empty the water reservoir.
- Remove the accessories from the accessory compartments.

Illustration K

- Open the maintenance lock. For this, place the open end of an extension pipe onto the maintenance lock, lock it into the guide and unscrew it.

Illustration L

- Completely empty the steam boiler to remove existing water.
- Use KÄRCHER decalcifying agents for descaling. Please follow the dosing instructions on the packaging when preparing the descaler.
- Pour the descaling solution into the boiler and allow it to react for approximately 8 hours.
- Completely empty the descaling solution after 8 hours. A small amount of the solution will remain in the boiler. Therefore, you should rinse the boiler two to three times with cold water to remove any residues of the descaler.

Illustration L

- Completely empty the steam boiler to remove existing water.
- Allow the storage compartment for the mains cable to dry.
- Screw the maintenance lock in using the extension pipe.
- Fill the water reservoir
- The steam cleaner is ready to use.

Care of the Accessories

Note

The floor cleaning cloth and the cloth cover have been pre-washed and can be used immediately for working with the steam cleaner.

- You can wash dirty floorcloths and cloth covers in the washing machine at 60°C. Do not use a liquid softener as this would affect the ability of the cloths to pick up dirt. You may tumble dry the terry cloths. The microfiber cloths are not suitable for the tumble.
